

# WHAT'S UP WITH THIS CORONAVIRUS ?

The coronavirus is a germ. It's so small that we can't see it.

MWAH HA HA!  
I'm invisible!

When kids get this virus, most of the time it's no big deal. But adults and especially older people can get really sick.

The Coronavirus travels from person to person if they touch or come close together. It can spread to many people very fast.

There's a new home for you, my child!

To slow down the virus and to keep it from making too many people sick, many schools are now closed and people are asked to stay home as much as possible.

People who are sick are asked to stay at home alone to keep the virus from spreading to new people.

It's hard not to be together but it makes it even harder for the virus to spread to new people.

It's ok, Grandma, we'll talk on the phone instead!

Oh, shoot.

Even when we don't feel sick, we can help slow down the virus by washing our hands often, coughing into our arms and avoiding crowds.

When we slow down the virus, we give scientists and hospitals more time to find a cure and to take care of sick people.

If everyone makes an effort, we can protect each other and save many lives!
